Assessing the Impact of Leadership Styles on Employee Motivation in Manchester's Retail Sector

Student Name:

Student ID:

Supervisor Name:

Abstract

This research examines the connection between leadership styles and motivation and levels of satisfaction of employees and leadership in retail business in Manchester. The study will involve three major leadership styles, transformational, transactional, and laissez-faire, and will include the relationship among each of the styles, employee attitudes, and work motivation. The data was done by using online survey where 50 employees in the retail industry were use as the sample and the data was analyzed using Statistical Package of the Social Sciences (SPSS). The data was interpreted by use of descriptive statistics, reliability testing, correlation analysis and multiple regression analysis.

The results show that leadership effectiveness in the retailing industry is seen as mediocre but not remarkably good. An aspect of transformational leadership, especially encouraging teamwork, effectiveness in communication and supporting employees, showed good positive relation with employee motivation and leadership satisfaction. Conversely, the transactional leadership behaviours, including rewards and performance monitoring, had less motivating impacts, whereas a laissez-faire leadership had varied results based on the degrees of direction and freedom. One of the key predictors of leadership satisfaction was established to be clear communication of long-term goals and organisational vision by regression analysis.

On the whole, the research has noted that transformational leadership, and more so, vision-oriented communication, is of immensely crucial importance in strengthening motivation and satisfaction in organized retail settings. The results have real-life implications on the profession of leadership development and are also valuable to the literature of leadership in the retail environment.

Acknowledgement

I would like to convey my heartfelt thankfulness to my supervisor in terms of their sustained support and help, effective feedback, and academic assistance through this research. I would also like to thank all the retail staff members who chose to take part in the survey and also gave me their rich experiences. Lastly, I would like to say a few words and thank my family and friends who provided support and encouragement throughout the course of this dissertation.

Declaration

I am verifying that it is my personal original dissertation, and it has not been presented to any other degree or qualification. The fact that all sources of information employed are duly recognized and cited in as per the academic guidelines and as per the academia ethics of the University.

Chapter One: Introduction

1.1 Background

It is a well known fact that employee motivation plays a key role in organisational success especially in an evolving and customer oriented environment that the retail industry is. Employees who are motivated will portray a better level of engagement, productivity, and service quality, whereas low motivation is mostly associated with high turnover, low performance, and disparate customer experiences (Chen et al., 2022). These challenges in the retail sector have become particularly visible in the retail sector in Manchester during efforts by the businesses to overcome competitive forces, workforce changes after the pandemic, and increasing customer expectations. The leadership style is often mentioned as a significant factor in motivation of the employees because it shapes the perceptions and attitudes of the employees towards their work, whether they feel appreciated and related to organisational objectives. Three main leadership styles that have been extensively researched in the management literature can be described as transformational, transactional and laissez-faire, with each leadership style being attributed to various behavioural styles, and motivation results. The ability to determine the specific effect of these styles to retail staff in Manchester gives a valuable opportunity in enhancing workforce stability and performance (Imran et al., 2025).

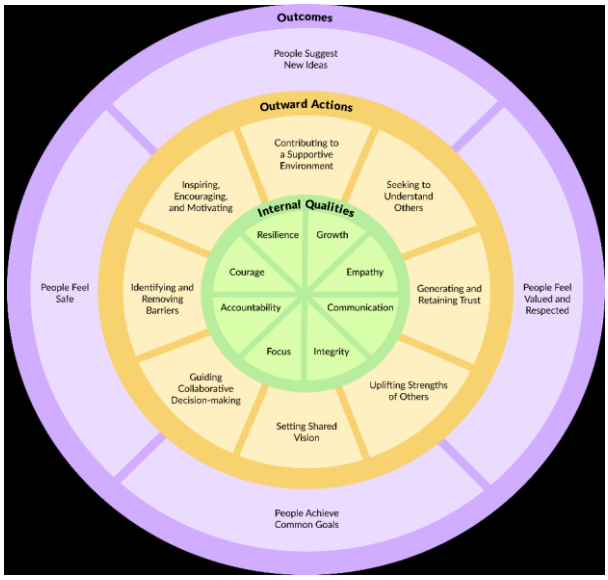
Chapter	Title	Description
Chapter One	Introduction	Provides the background, research motivation, aim, objectives, research questions, and brief methodology. It also explains the study's significance and outlines the overall structure of the dissertation for clear guidance.
Chapter Two	Literature Review	Reviews theoretical and empirical studies on leadership styles and employee motivation, introduces the conceptual framework, identifies gaps in existing literature, and establishes a strong foundation for the research context and direction.
Chapter Three	Methodology	Describes the research philosophy, approach, and strategy, along with data collection tools, sampling methods, validity, reliability, and SPSS analysis techniques. Ethical considerations and justifications for methodological choices are also presented clearly.
Chapter Four	Presentation, Analysis and Interpretation of Findings	Presents descriptive and inferential statistical results using SPSS, including correlations and regression outputs. The chapter interprets key findings to highlight meaningful relationships between leadership styles and employee motivation.
Chapter Five	Discussion of Findings	Discusses how the findings answer the research questions, compares results with existing literature, explores differences, and explains implications. It highlights the practical and theoretical relevance of the study's outcomes.
Chapter Six	Conclusion	Summarizes the research aim, questions, and key findings. Highlights contributions, limitations, practical implications, and offers recommendations for future research and leadership improvements within the retail sector.



Outcomes
People Suggest New Ideas
Outward Actions
Contributing to a Supportive Environment
Seeking to Understand Others
Generating and Retaining Trust
Uplifting Strengths of Others
Setting Shared Vision
Guiding Collaborative Decision-making
Identifying and Removing Barriers
Inspiring, Encouraging, and Motivating
Internal Qualities
Resilience
Growth
Empathy
Communication
Integrity
Focus
Accountability
Courage
People Feel Safe
People Feel Valued and Respected
People Achieve Common Goals

[redacted]

[redacted]

[redacted]

Leadership Style	Description	Key Behaviours	Expected Employee Outcome
Transformational	Inspires employees through vision, encouragement, and empowerment.	Individualised consideration, inspirational motivation, intellectual stimulation.	High motivation, engagement, creativity, and loyalty.
Transactional	Focuses on structured tasks, rewards, and performance-based exchanges.	Contingent rewards, active management-by-exception.	Short-term motivation, compliance, moderate satisfaction.
Laissez-faire	Leader provides minimal direction and avoids decision-making.	Absence of guidance, delayed feedback, passive behaviour.	Low motivation, poor performance, role confusion.
Democratic	Encourages participation and shared decision-making.	Collaboration, open communication, group discussion.	Higher satisfaction and commitment; good idea generation.
Autocratic	Leader maintains full control and authority over decisions.	Directive commands, strict oversight, limited participation.	Fast decision-making but lower morale and creativity.

[redacted]

[redacted]

Motivation Factor	Internal/External	Description	Impact on Workplace
Intrinsic	Internal	Motivation driven by personal satisfaction, purpose, and enjoyment.	Increases creativity, commitment, and quality of work.
Extrinsic	External	Motivation driven by rewards, pay, recognition, and benefits.	Improves short-term performance and compliance.
Recognition	External	Acknowledgment of employee achievements by leaders or supervisors.	Boosts morale and reinforces positive behaviours.
Work Environment	Internal/External	Overall physical, social, and psychological climate at work.	Influences engagement, stress, and retention.
Career Growth	Internal/External	Opportunities for learning, development, and promotion.	Increases long-term loyalty and productivity.

Methodology	Data Collection Tool	Strengths	Limitations
Quantitative	Structured survey questionnaires	Produces measurable, comparable data; supports statistical testing.	Lacks depth and subjective insights.
Qualitative	Interviews, focus groups	Offers rich, detailed understanding of employee experiences.	Time-consuming; limited generalisability.
Mixed Methods	Combination of surveys and interviews	Balances depth and generalisability.	Requires more resources and expertise.
Cross-sectional	One-time survey	Fast data collection; good for large samples.	Cannot identify cause-and-effect relationships.
Methodology	**Data Collection Tool**	**Strengths**	**Limitations**

[redacted]

[redacted]

Research Gap	Description	Importance	Implication for Current Study
Regional Gap	Limited studies focused specifically on Manchester retail sector.	Regional differences may influence leadership effectiveness.	This study provides local, retail-specific data.
Sector-specific Gap	Most studies focus on healthcare, education, or corporate sectors.	Retail environment is fast-paced and customer-driven.	Addresses lack of evidence for retail employees.
Methodological Gap	Many studies rely on small samples or qualitative methods.	Larger quantitative data improves reliability and generalisability.	This study uses quantitative SPSS analysis.
Theoretical Gap	Few studies apply Full Range Leadership Theory to UK retail.	FRLT is globally validated but underexamined locally.	Applies FRLT directly to a new sector and region.
Research Gap	**Description**	**Importance**	**Implication for Current Study**
