I would also like to say my great appreciation to my supervisor for guidance, provided constructive criticism and idea along with academic guidance during this dissertation. I also owe the members of the faculty for their helpful pieces of advice. Lastly, I would like to thank my family and friends, who unceasingly supported and motivated me within the process of completing this research and being patient.

Declaration

It is my responsibility to assert that this dissertation is purely my original work and has neither been presented anywhere before in any other academic award. Each source of information has been cited and mentioned in line with the academic standards of citation. This dissertation has been done in accordance with the academic integrity and ethical standards of the university.

Abstract

The electric vehicle (EV) sector in the world is changing at a rapid pace due to the technological shock, sustainability challenges, and changing customer demands. Here, business model innovation has become an important factor to define long-term competitiveness and strategic survival. The dissertation is an assessment of the role of business model innovation to provide sustained competitive advantage in the global EV industry with a specific emphasis on Tesla. The qualitative, secondary-based research methodology with the philosophy of interpretivism and approach of deduction is utilized in the study to synthesize the theories of strategic management, such as business model innovation theory, resource-based view, dynamical capabilities, and strategies of ecosystem.

The analysis explores the business model that Tesla currently has with its strategic plans, marketing and human resource, and investment strategies to determine the role of integrated planning in facilitating resilience and differentiation. The results have shown that the competitive position of Tesla is not caused by individual technological breakthroughs but by a strong, coordinated interaction between vertical integration, digital solutions, ecosystem building, and investment streams. The paper also shows that Tesla manages to suit its business model to technological and market disruption yet aligns innovation and sustainability goals. The conclusion of the dissertation is that holistic business model innovation is necessary when firms are trying to achieve long-term strategic sustainability in the global and more complex EV market.

Abstract 4

Chapter 1: Introduction 11

1.1 Background of the Study 11

1.1.1 Transformation of the Global Automotive and Electric Vehicle Industry 11

1.1.2 Emergence of Business Model Innovation as a Strategic Imperative 11

1.2 Rationale for the Research 12

1.2.1 Strategic Importance of Business Model Innovation in the EV Industry 12

1.2.2 Academic and Managerial Relevance of the Study 12

1.3 Aim of the Study 13

1.4 Research Objectives 13

1.5 Research Questions 14

1.6 Scope of the Study 14

1.7 Significance of the Study 15

1.8 Structure of the Dissertation 15

Chapter 2: Literature Review 16

2.1 Introduction 16

2.2 Overview of the Global Electric Vehicle Industry 17

2.2.1 Industry Size, Growth, and Market Expansion 17

2.2.2 Major Players and Competitive Landscape 19

2.2.3 Global Competitive Dynamics and Industry Structure 20

2.3 Business Models in the Automotive and EV Industry 21

2.3.1 Traditional Automotive Business Models 21

2.3.2 Emerging EV Business Models 22
2.3.3 Comparative Analysis of EV Business Model Approaches 22
2.4 Business Model Innovation: Concepts and Drivers 23
2.4.1 Defining Business Model Innovation 23
2.4.2 Drivers of Business Model Innovation in the EV Industry 24
2.4.3 Risks and Challenges Associated with Business Model Innovation 24
2.5 Theoretical Foundations of Business Model Innovation 25
2.5.1 Resource-Based View (RBV) 25
2.5.2 Dynamic Capabilities Theory 25
2.5.3 Ecosystem and Value Network Perspectives 25
2.5.4 Institutional and Policy Perspectives 25
2.6 Marketing Mix Analysis in the EV Industry 26
2.6.1 Product and Price 26
2.6.2 Place and Promotion 27
2.6.3 Digital Marketing and Customer Relationship Management 27
2.7 Market Segmentation, Targeting, and Positioning 27
2.7.1 Market Segmentation 27
2.7.2 Target Market Strategies 28
2.7.3 Competitive Positioning 28
2.7.4 Strategic Implications of Segmentation and Positioning 28
2.8 Business Model Canvas and Conceptual Issues 29
2.8.1 Limitations of the Business Model Canvas in the EV Context 29
2.9 Business Model Innovation and Long-Term Competitiveness 29
2.9.1 Financial Sustainability and Profitability Considerations 30
2.10 Research Gaps and Conceptual Focus 30

2.11 Chapter Summary 30
Chapter 3: Methodology 32
3.1 Introduction 32
3.2 Research Aim and Objectives 32
3.2.1 Alignment of Aim with Methodological Design 32
3.2.2 Operationalization of Research Objectives 32
3.3 Research Philosophy 33
3.3.1 Interpretivist Perspective 33
3.3.2 Business Model Innovation Research Relevance 33
3.4 Research Approach 33
3.4.1 Deductive Approach 33
3.4.2 Qualitative Orientation 34
3.5 Research Methodology and Design 34
3.5.1 Secondary Research Methodology 34
3.5.2 Justification for Secondary Data 34
3.6 Selection of Strategic Models, Concepts, and Theories 35
3.6.1 Business Model Innovation Theory 35
3.6.2 Dynamic Capabilities and Resource-Based View 35
3.6.3 Ecosystem and Institutional Approaches 35
3.7 Strategic Analysis Tools 35
3.7.1 Macro-Environmental and Industry Analysis 35
3.7.2 Business Model Analysis 36
3.8 Data Sources and Secondary Markets Research 36
3.8.1 Sources of Secondary Data 36
3.8.2 Data Evaluation and Triangulation 36

3.9 Feasibility Analysis 36
3.10 Critical Evaluation of Methodology 37
3.11 Research Limitations and Future Research Directions 37
3.11.1 Scope and Data Limitations 37
3.11.2 Implications for Future Research 37
3.12 Conclusion 37
Chapter 4: Analysis and Discussion 39
4.1 Introduction 39
4.2 Global Electric Vehicle Industry Landscape and Competitive Pressures 39
4.3 Tesla's Prevailing Business Model within the EV Industry 40
4.3.1 Value Proposition and Strategic Positioning 41
4.3.2 Value Creation through Vertical Integration 41
4.3.3 Value Delivery and Direct-to-Consumer Model 41
4.3.4 Revenue Model and Long-Term Orientation 42
4.4 Innovative Business Model Components Driving Competitive Advantage 42
4.4.1 Technological Innovation as a Strategic Asset 42
4.4.2 Ecosystem-Based Innovation 43
4.4.3 Data-Driven and Platform-Oriented Business Model 44
4.5 Strategic Plan Analysis 44
4.6 Marketing Plan Analysis 45
4.7 Human Resource (HR) Plan Analysis 46
4.8 Investment Plan Analysis 47
4.9 Discussion of Analysis 48
4.9.1 Business Model Innovation and Sustained Competitiveness 48
4.9.2 Addressing Technological and Market Disruption 49

4.9.3 Strategic Sustainability through Integrated Planning 49
4.9.4 Adaptation and Dynamic Capabilities 50
4.9.5 Implications for the Global EV Industry 50
4.10 Conclusion 51
Chapter 5: Conclusion and Recommendations 52
5.1 Introduction 52
5.2 Summary of Key Findings 52
5.3 Achievement of Research Aim and Objectives 53
5.4 Conclusions in Relation to Research Questions 54
5.5 Strategic Recommendations 54
5.6 Contribution to Knowledge and Practice 55
5.7 Limitations and Future Research Directions 56
5.7.1 Study Limitations 56
5.7.2 Future Research Directions 56
5.8 Final Remark 56

Chapter 1: Introduction

1.1 Background of the Study

1.1.1 Transformation of the Global Automotive and Electric Vehicle Industry

The world car industry is experiencing a revolution that has never been witnessed in history due to technology, environmental sustainability needs, and changing consumer demands. The key aspect in this transformation is the mushrooming of the electric vehicle (EV) industry. The use of electric vehicles is regarded as one of the key solutions to greenhouse gas emissions, the decrease in the reliance on fossil fuels, and the attainment of sustainable environmental and economic results in the long term(Zang et al., 2024). It has resulted in the governments of countries around the world implementing strict policies on emissions, financial policies, and policy frameworks to expedite the process of replacing the internal combustion engine with electric mobility. This has seen the EV industry grow out of a niche market and become a highly competitive sector with established automotive manufacturers, technology companies, and new market entrants all drawn to this industry(Moro et al., 2023). This stiffening competition has changed the industry dynamics, and firms will have to reconsider not just the product strategies but also the wider organizational and strategic setups.

1.1.2 Emergence of Business Model Innovation as a Strategic Imperative

Even though the technological development of electric vehicles has been one of the driving forces behind the growth of the industry, it has also changed the conventional models of automotive business. Traditional automotive companies have traditionally depended on vertically integrated production, dealer-driven distribution channels, and sources of revenue that are significantly dependent on vehicle sales and after-sales services. Conversely, EV companies are moving towards new business models that focus on digitalization, platform-based ecosystems, direct-to-consumer business, subscriptions, battery-as-a-service, software-based value creation, and strategic ecosystems(Zaino et al., 2024). These developments are indicative of a wider transformation from product-oriented models to service-based and customer-oriented models. Business model innovation has thus emerged as one of the strategic tools that are very imperative to firms aiming to attain long-term competitiveness in the electric vehicle industry across the world. With the rapid pace of technological change and the growing level of competition,

Chapter	Title	Description
Chapter 1	Introduction	Provides background to the study and outlines the research rationale, aim, objectives, research questions, scope, and significance of the research.
Chapter 2	Literature Review	Reviews academic and industry literature related to the electric vehicle industry, business model innovation, competitive advantage, and sustainability. Relevant theories, frameworks, and conceptual models are critically evaluated.
Chapter 3	Research Methodology	Explains the secondary research approach adopted in the study, including data sources, analytical methods, and research limitations.
Chapter 4	Analysis and Discussion	Analyses secondary data and literature findings to evaluate business model innovation practices in the global electric vehicle industry and their impact on long-term competitiveness.
Chapter 5	Conclusions and Recommendations	Summarizes key findings, evaluates the achievement of research objectives, discusses managerial and strategic implications, and proposes recommendations and directions for future research.

[redacted]

[redacted]

Category of Company	Examples of Firms	Core Competitive Strengths	Business Model Orientation
Traditional Automotive Manufacturers	Volkswagen, Toyota, General Motors, BMW	Manufacturing scale, brand equity, global distribution networks	Product-centric with gradual shift toward service and digital integration
EV-Oriented Start-ups	Tesla, BYD, NIO, Rivian	Technological innovation, agility, customer-centric design	Direct-to-consumer, platform-based, service-oriented
Technology-Oriented Firms	Apple, Google, Foxconn	Software expertise, data analytics, ecosystem orchestration	Ecosystem-based, software and service-driven

[redacted]

[redacted]

[redacted]

[redacted]

Porter's Force	Intensity	EV Industry Explanation
Competitive Rivalry	High	Rapid market growth, frequent new model launches, price competition, and presence of both incumbents and start-ups
Threat of New Entrants	Moderate to High	Lower entry barriers due to modular production and digital platforms, but high capital and regulatory requirements remain
Bargaining Power of Buyers	High	Increased consumer awareness, multiple brand choices, improving charging infrastructure enabling easy switching
Bargaining Power of Suppliers	High	Dependence on battery suppliers and rare earth materials with limited global supply
Threat of Substitutes	Low to Moderate	Limited substitutes in the short term, including hybrids and shared mobility services

[redacted]

Dimension	Traditional Automotive Business Model	Emerging EV Business Model
Revenue Generation	One-time vehicle sales and after-sales services	Recurring revenues through subscriptions, software, and services
Distribution	Dealership-based, multi-layered intermediaries	Direct-to-consumer and digital platforms
Customer Relationship	Transaction-focused	Long-term, data-driven customer engagement
Innovation Focus	Incremental product improvements	Continuous digital and service innovation
Cost Structure	High fixed manufacturing costs	Flexible, scalable, and platform-based cost structures

[redacted]

[redacted]

Business Model Approach	Key Characteristics	Advantages	Limitations	Strategic Implications
Vertical Integration	In-house control of batteries, software, and distribution	Greater quality control, faster innovation cycles	High capital intensity and financial risk	Suitable for firms with strong financial and technological capabilities
Partnership-Based Models	Collaboration with energy, technology, and infrastructure partners	Reduced capital burden, faster market entry	Limited control over critical resources	Effective for rapid scaling and risk-sharing
Platform Ecosystem Models	Integration of vehicles, software, data, and third-party services	Long-term customer lock-in and diversified revenue streams	High complexity and coordination challenges	Enhances competitiveness through ecosystem orchestration

[redacted]

[redacted]

[redacted]

[redacted]

[redacted]

[redacted]

Category	Key Drivers	Associated Risks and Challenges	Strategic Implications
Technological	Advances in batteries, software, connectivity	Technological uncertainty and rapid obsolescence	Requires continuous learning and adaptability
Regulatory	Emission regulations, sustainability policies	Policy uncertainty across regions	Necessitates flexible and locally adaptive models
Market and Competition	Changing consumer preferences, intense competition	Risk of imitation and erosion of differentiation	Firms must innovate continuously to sustain advantage

Business Model Component	Description in Tesla's Model	Strategic Contribution to Competitiveness
Value Proposition & Strategic Positioning	High-performance, sustainable electric vehicles integrating advanced software and digital connectivity	Differentiates Tesla through innovation, performance, ecosystem integration, and superior customer value
Vertical Integration	Internal control of batteries, software, manufacturing, powertrain engineering, and charging infrastructure	Accelerates innovation, protects proprietary capabilities, reduces costs, and enhances strategic flexibility
Value Delivery (Direct-to-Consumer Model)	Online sales and Tesla-owned stores replacing traditional automotive dealership distribution	Improves pricing control, customer relationships, brand consistency, and data-driven service improvements
Revenue Model & Long-Term Orientation	Vehicle sales combined with software subscriptions, energy products, carbon credits, and services	Diversifies revenues, increases recurring income, and supports long-term financial sustainability

[redacted]

[redacted]

[redacted]

[redacted]

[redacted]

[redacted]

[redacted]

[redacted]

[redacted]

[redacted]

Innovative Component	Key Characteristics	Impact on Long-Term Competitiveness
Technological Innovation as a Strategic Asset	Continuous improvements in battery efficiency, autonomous driving software, and over-the-air updates	Sustains product differentiation, lowers long-term operational costs, and prolongs vehicle relevance
Ecosystem-Based Innovation	Integration of vehicles, energy storage, solar solutions, and proprietary Supercharger infrastructure	Creates switching costs, network effects, and ecosystem lock-in that competitors find difficult to replicate
Data-Driven & Platform-Oriented Model	Real-time vehicle and user data used for software optimization, predictive maintenance, and feature personalization	Enables continuous learning, scalability, and rapid innovation without physical product redesign

[redacted]

[redacted]

[redacted]

[redacted]

[redacted]

[redacted]

Strategic Dimension	Tesla's Strategic Approach	Evidence from Tesla Practice	Contribution to Long-Term Competitiveness
Strategic Vision	Accelerating the global transition to sustainable energy	Public mission statement; integration of EVs, energy storage, and solar	Aligns growth with sustainability, strengthening legitimacy and long-term relevance
Growth Orientation	Long-term scalability over short-term profitability	Reinvestment of earnings into capacity and R&D	Builds durable competitive advantages rather than short-term margins
Manufacturing Strategy	Global Giga factory model	Giga factories in the US, China, Germany, and expansion plans	Reduces costs, improves supply-chain resilience, and supports regional demand
Innovation Strategy	Continuous technological leadership	Battery innovation, software-led vehicles, autonomous driving	Sustains differentiation in a rapidly converging EV market
Risk Management	Geographic and operational diversification	Multi-region production and sourcing	Mitigates geopolitical, regulatory, and logistical risks

[redacted]

[redacted]

Marketing Element	Tesla's Approach	Key Characteristics	Strategic Impact
Advertising Strategy	Minimal traditional advertising	No mass-media ad campaigns	Significantly lowers customer acquisition costs
Brand Positioning	Technology-driven, sustainable innovator	Focus on performance, software, and clean energy	Differentiates Tesla from conventional automakers
Customer Engagement	Direct digital interaction	Social media, product launches, online platforms	Strengthens brand loyalty and engagement
Communication Channels	Digital-first and word-of-mouth	CEO visibility, viral launches, user advocacy	Enhances reach without advertising expenditure
Sustainability Messaging	Integrated into brand identity	Clean energy, emissions reduction, innovation	Resonates with environmentally conscious consumers

[redacted]

[redacted]

[redacted]

[redacted]

HR Dimension	Tesla's HR Approach	Key Features	Strategic Contribution
Talent Focus	High-skilled technical workforce	Engineers, software developers, manufacturing specialists	Supports innovation-led competitive strategy
Organizational Culture	Performance-driven and results-oriented	High expectations, rapid execution	Accelerates innovation cycles and time-to-market
Capability Development	Learning through experimentation	Cross-functional teams, fast iteration	Builds adaptive organizational capabilities
Workforce Challenges	High pressure and demanding environment	Reports of high workload and turnover risk	Trade-off between speed and retention
Strategic Role of HR	Enabler of dynamic capabilities	Talent aligned with strategy and technology	Sustains long-term adaptability and innovation

[redacted]

[redacted]

[redacted]

[redacted]

Investment Area	Focus of Investment	Examples from Tesla	Strategic Outcome
Manufacturing Capacity	Large-scale production expansion	Giga factories worldwide	Achieves economies of scale and cost leadership
Battery Technology	Efficiency and cost reduction	In-house battery development and innovation	Strengthens control over critical EV components
Artificial Intelligence	Autonomous driving systems	Full Self-Driving (FSD) software development	Positions Tesla for future mobility services
Energy Infrastructure	Integrated energy ecosystem	Supercharger network, energy storage	Enhances ecosystem control and customer lock-in
Long-Term Orientation	Reinvestment over dividends	Capital-intensive growth strategy	Builds strategic autonomy and high entry barriers
