1. Introduction

The DIM22104 web design project was based on the creation of a fully functioning and responsive web site that incorporates three major elements, i.e., a blog, a shop and a live contact interface. The primary goal of this was to demonstrate that one could design, develop, and deploy a coherent web presence, which can satisfy aesthetic and usability demands. This reflection also gives a clear analysis of the entire development cycle, the means of design, functionality of e-commerce, and programming languages, and the marketing tools that were created to make it more noticeable. The current portfolio should critically review all the decisions being made in the course of the project implementation, gauge the challenges that I encountered, and identify the learning outcomes achieved (Romanyuk and Kovalova, 2025). It also discusses the design and coding justification regarding design decisions and code decisions and evaluates their role in increasing the user engagement and accessibility. The project enabled putting into practice theoretical principles of web design at a more practical level—especially in the fields of User Interface (UI) and User Experience (UX) design. By this reflective treatise, I would like to show, besides only my technical development, my perception of strategic development of websites as a form of communicative and marketing instrument in the digital media scenario.
