Assignment Cover Sheet: Please attach this cover sheet to the front of **every assignment** you submit to the university. Please be sure to **sign the declarations below** before you submit this sheet. Failure to sign the declarations may result in your work being unmarked.

Student Name	
Student ID	
Programme	BSc Digital Marketing
Module Name & Code	Web Design & Coding Basics DIM22104
Assignment Name & No.	Portfolio reflection, Blogpost

Declaration:

I have complied with Ravensbourne University's Academic Regulations and BSM AI Guidelines provided by your assignment leader and have **acknowledged** the work and ideas of others that I have used in the production of this assignment.

Signed: _____

I have read the Business Management course statement on AI and can confirm that **I have not used** AI/LLM technologies in the production of this assignment:

Signed: _____

I have read the Business Management course statement on AI and can confirm that **I have used** AI/LLM technologies in the production of this assignment [complete the boxes below]:

Signed: _____

Software used and publisher:	

e.g., ChatGPT4/Canva Magic Studio Grammarly	
Links to the AI tools you used	
Description and rationale for the use of AI software(add evidence where appropriate).	

Date:_____

Task 2: Individual Written Reflection (Portfolio)

Introduction

This reflective portfolio represents a summary of the whole process of designing and developing my website project, which is named MySite. The primary goal of the project was to build a professional, creative, and easy-to-use site that can evoke aesthetic beauty and useful efficiency. The important features of the project involved a home page, store, blog, contact section, and the general integration of the design with the marketing materials.

This reflection aims to describe the decisions of my design, the naming conventions of my codes, and my creative thinking during the design. It dwells on how each element of the site was designed and executed, including layout, color themes, interactive design, and e-commerce features. One thing that the project also taught me is the application of the concepts of UX and UI in actual practice and how the front-end code languages can be applied in order to provide a smooth user experience.

This reflection will also detail my applied use of HTML, CSS, and JavaScript during practical coding; the creation of marketing materials to promote in an online setting; and what I learned in the process. In general, this project helped me to strengthen my knowledge about the basics of web design, user-specific design, code logic, and the combination of digital marketing in a single portfolio.

Technical Challenges and Solutions
Achieving responsive and adaptable design across devices introduced several technical challenges. The use of CSS Grid and Flexbox became essential to maintain alignment, spacing, and content balance across different screen widths. Extensive testing was done to adjust padding, font scaling, and media queries. Subtle animations and hover effects were added for smoother interactions. Through iteration, layout bugs were resolved, ensuring visual integrity remained consistent without sacrificing performance or accessibility across browsers and devices.
Tools and Technologies Used
Adobe XD played a central role in wireframing and prototyping, enabling clear visualization of layout and structure before coding. The development process relied on semantic HTML for accessibility, modern CSS for responsive styling, and JavaScript for interactivity. Together, these tools ensured a modular, maintainable structure with smooth transitions and responsive components. The combination of thoughtful design and efficient code created a lightweight yet dynamic site optimized for visual clarity and performance.
